

## CLAIMS

1. A gaming device comprising:
  - a housing;
  - a primary game display;
  - 5 a computer processor configured to randomly select and display winning and losing outcomes as said display;
  - a bonus selection apparatus including a depiction of a three-dimensional object, or a two-dimensional object such as a disc or wheel, having a plurality of surface elements, each of said elements configured to present a display of a
  - 10 bonus award;
  - said surface elements configured with some kind of display technology, such as video or LED indicators, that allow said bonus awards to change upon game conditions.
  - 15 said processor configured to control said bonus apparatus to depict said object moving to select and display a surface element and the bonus award thereof; and
  - means for the device to issue the bonus award.
2. The device of claim 1 comprising said bonus selection apparatus such as a three-dimensional object or two-dimensional object such as a wheel, including said surface elements, a driver for rotation of said object about at least one axis to position an element for selection of said bonus award and said processor configured to control said driver for selection of said bonus award.
- 20 3. The device of claim 2 comprising said object is a sphere to simulate a ball.

4. The device of claim 2 comprising said object is a wheel or disc apparatus.
5. The device of claim 2 comprising said object is an ellipsoid to simulate a football.
6. The device of claim 2 comprising each surface element includes a display of a bonus prize or prizes, means for positioning an element in a position to define the bonus to be awarded and means for displaying said element at said bonus defining position.  
5
7. The device of claim 2 comprising a plurality of said elements having reflective or planar surfaces.
8. The device of claim 2 comprising a plurality of said elements having reflective or planar surfaces, projection means for projecting a display of a bonus amount to a reflective element positioned to reflect said projected bonus amount for viewing.  
10
9. The device of claim 1 comprising a video display, said processor configured to display said object in a rotating mode and in a stopped mode to position an element to display said bonus prize.  
15
10. The device of claim 2 comprising a multiple number of three-dimensional objects.
11. The device of claim 2 comprising a multiple number of wheels or discs.
- 20
12. The device of claim 2 comprising a combination of wheels, discs and 3-dimensional objects, in any number.
13. The device of claim 2 with said processor configured to award multiple bonus awards to the player.

14. The device of claim 2 comprising an outer ring configured to display one component of a bonus award and an inner display to display another component for the bonus.

5 15. The device of claim 11 comprising said inner display is mounted for rotation relative to the outer ring.

16. The device of claim 2 comprising said surface elements include a plurality of door panels each controlled to open and close to reveal a bonus award.

17. A method for displaying a bonus award for a gaming device of the type having a housing and a primary game display, the method comprising:

10 providing a computer processor configured to randomly select and display winning and losing outcomes as said display and designating at least one outcome as a bonus outcome;

15 providing a bonus selection apparatus including a depiction of a three-dimensional object having a plurality of surface elements, each of said elements configured to present a display of a bonus award;

said processor controlling said bonus apparatus to depict said object moving to select and display a surface element and the bonus award thereof; and;

issuing the displayed bonus award.

20 18. A method for displaying a bonus award for a gaming device of the type having a housing and a primary game display, the method comprising:

providing a computer processor configured to randomly select a bonus apparatus-triggering condition;

providing a bonus selection apparatus including a depiction of a three-dimensional object having a plurality of surface elements, each of said elements configured to present a display of a bonus award;

said processor controlling said bonus apparatus to depict said object moving to select and display a surface element and the bonus award thereof; and;

issuing the displayed bonus award.
